

Weak Model

Produces a wrong reasoning path.

Correct Solution

Leads to the final correct answer.

1. Wrong Path from Weak Model

The weak model generates a sequence of wrong steps that leads to a dead end.

2. Forced Detour

We force the model to start from a wrong prefix.

3. Learn to Recover

The model learns to switch to the correct solution path.

4. Reach the Goal

The model follows the correct solution path and reaches the answer.
